# We Offer The Solution

That Customers Are Asking For.

AP Exhaust Technologies is the leader in high quality catalytic converters and is known for developing products that solve difficult emissions problems. In collaboration with Aristo®, manufacturer of advanced catalyst, AP introduces the Select+Plus TechSeries. The Select+Plus TechSeries caters to the ULEV and higher vehicle emission certifications:

- Contains approximately 40% higher precious metal content than most other aftermarket brands.
- Aristo® Intelligent Catalyst Technology® provides faster light off and promotes better activity in the catalytic reaction.
- The high substrate volume, at 5" to 7" internal brick, allows for better conversion due to longer contact time with the exhaust gas.
- Improves O<sub>2</sub> storage and release, due to the proprietary washcoat formulation and processing methods.
- Our experience gained from engineering CARB approved converters is built into the Select+Plus TechSeries product line.
- Warranty period is for 5 years 50,000 miles for the emissions requirement and the stainless steel body and nipples.

## SELECT+PLUS TechSeries

*Why offer an EPA Universal Converter with such a high substrate volume, advanced washcoat and high metal content?*

*There are an ever increasing number of vehicles with California emissions being sold in states other than California. Additionally, more vehicles are incurring higher mileage and heavier workloads. As a result, customers are requesting premium quality converters that will keep the air clean and the MIL light off on even the hardest and dirtiest running vehicles.*
